Subject: CR621 and CR779

Colette,

As a follow-up to our call yesterday, CR0621 is the "ENCORE" work effort for correcting the ECCKT not being returned on Line share orders. It is related to CR0766 but not the same. CR0766 is the LNP work effort for the same issue and it is currently scheduled for Release 10.6. We are currently working hard to get CR0621 scheduled for a release and will let you know as soon as we know.

CR0779 is still a validated defect but we do not have a scheduled release date. We are working to get these expedited internally.

If you have any other questions, please advise.

Thanks,

Steve Hancock  
Change Management Team
